

Marina Wahid

AI Engineer & Flutter Developer

Egypt | +01063927269 | marinawahid124@gmail.com | GitHub: <https://github.com/Ai-MAFlutter>

LinkedIn: <https://www.linkedin.com/in/marina-wahid-a5769b393>

Objective

"Mobile Development Specialist (Flutter/Dart) focused on delivering high-performance, cross-platform applications. I leverage a strong foundation in AI/ML principles to actively enhance app functionality and user engagement. Seeking a role to drive impactful product development within a forward-thinking team."

EDUCATION

Bachelor of Science in computer science | Assuit National University | 2023–2027

Major: Artificial Intelligence

Skills & Abilities

Python programming

Dart programming

SQL for data querying

Machine Learning basics (Supervised & Unsupervised Learning)

Problem-solving and analytical thinking

State Management(Provider/Bloc)

Projects

1.Colon Cancer Prediction using miRNA Dataset

Project Developer | Python, Pandas, Scikit-learn, Jupyter | March 2025 – May 2025

Description:Built a machine learning model to predict colon cancer

2.Pharmacy Management System

Database Designer | Microsoft Access | May 2024 – June 2024

Description: Developed a pharmacy management system using Microsoft Access.

Designedrelational tables, forms, and reports to manage medicines, customers, and sales data

3.Connect 4 Game Development using Java

Software Developer | Java, JavaFX/Swing | February 2024 – March 2024

Description: Developed a complete Connect 4 game using Java.

4.Comprehensive Grocery E-Commerce Application

Flutter, Dart, Supabase (Firestore/Authentication)

Description: Developed a full-featured, cross-platform e-commerce grocery application. Implemented a system for product management, shopping cart functionality, and user registration/authentication, utilizing Firebase as the backend service.

5. StudyCore Learning Application

Flutter, Dart

Description:

Developed a modern educational mobile application designed to help users organize and access study materials efficiently. Implemented multiple UI screens including splash screen, onboarding, and structured navigation. Focused on clean UI/UX design and smooth user experience across different devices.

6. Event Hub App

Flutter, Dart, Firebase

Description:

Built a cross-platform event management application that allows users to explore and manage events. Integrated Firebase for real-time data handling and backend services. Implemented features such as event listing, user interaction, and dynamic UI updates.

7. News Application

Flutter, Dart, API Integration (Dio)

Description:

Created a news application that fetches real-time data from APIs using Dio. Designed multiple categories and dynamic content display. Focused on efficient data handling and responsive UI across platforms including Windows.

8. Splash Screen & UI Design System

Flutter, Dart

Description:

Built reusable UI components and splash screens for mobile applications. Focused on branding elements including logos and smooth transitions to enhance the first impression of the app
